

ORIMIX

Genuine Acidifier for Poultry Feed

Composition

Orimix contains unique proprietary blend of buffered organic acids, mainly Acetic, Propionic, Formic, Butyric, Citric, Ascorbic and their salts with Anti-urease saponin for the specific use in poultry feed.

Benefits

- Controls the growth and multiplication of harmful pathogens in feed by creating acidic condition in feed
- Improves the palatability followed by feed intake
- Acidifies G.I. tract and duodenum and thus favors growth of *Acidophilus* bacterial flora which prevents harmful pathogens
- Achieves low intestinal pH which diminishes *Salmonella*, *E.coli*, *Clostridium* and other harmful sp.
- Improves digestion, absorption and assimilation of feed nutrients
- Better feed efficiency, performance index and carcass quality
- Activates digestive enzymes
- Increased size of villi and thinning of intestinal wall which helps in better absorption & utilization of feed nutrients
- Reduces ammonia production
- Improves egg production, egg mass and

Organic Acids

The performance promoter

Formic Acid Most effective harmful pathogen killer

Propionic Acid Inhibits the growth of fungi and molds

Acetic Acid Increased feed intake & FCR

Citric Acid Responsible for rupturing of cell wall and destruction of harmful pathogens

Butyric Acid Pathogen reducer and energy provider to intestinal epithelial cells

Ascorbic Acid Vitamin C an essential Nutrient

Anti-urease Saponin Ammonia inhibitor and growth promoter

Dosage: 1.5 kg per ton of Feed
